

16

Declaring Variables

Objectives

After completing this lesson, you should be able to do the following:

- **Recognize the basic PL/SQL block and its sections**
- **Describe the significance of variables in PL/SQL**
- **Distinguish between PL/SQL and non-PL/SQL variables**
- **Declare PL/SQL variables**
- **Execute a PL/SQL block**

PL/SQL Block Structure

- **DECLARE** – Optional
 - Variables, cursors, user-defined exceptions
- **BEGIN** – Mandatory
 - SQL statements
 - PL/SQL statements
- **EXCEPTION** – Optional
 - Actions to perform when errors occur
- **END;** – Mandatory

```
DECLARE
...
BEGIN
...
EXCEPTION
...
END;
```

PL/SQL Block Structure

```
DECLARE
    v_variable  VARCHAR2(5);
BEGIN
    SELECT      column_name
    INTO        v_variable
    FROM        table_name;
EXCEPTION
    WHEN exception_name THEN
        ...
END;
```

```
DECLARE
    ...
BEGIN
    ...
EXCEPTION
    ...
END;
```

Block Types

Anonymous

```
[DECLARE]

BEGIN
    --statements

[EXCEPTION]

END ;
```

Procedure

```
PROCEDURE name
IS

BEGIN
    --statements

[EXCEPTION]

END ;
```

Function

```
FUNCTION name
RETURN datatype
IS
BEGIN
    --statements
    RETURN value;
[EXCEPTION]

END ;
```

Program Constructs

Use of Variables

Use variables for:

- **Temporary storage of data**
- **Manipulation of stored values**
- **Reusability**
- **Ease of maintenance**

Handling Variables in PL/SQL

- **Declare and initialize variables within the declaration section.**
- **Assign new values to variables within the executable section.**
- **Pass values into PL/SQL blocks through parameters.**
- **View results through output variables.**

Types of Variables

- **PL/SQL variables**
 - **Scalar**
 - **Composite**
 - **Reference**
 - **LOB (large objects)**
- **Non-PL/SQL variables**
 - **Bind and host variables**

Types of Variables

25-OCT-99

TRUE

"Four score and seven years ago
our fathers brought forth upon
this continent, a new nation,
conceived in LIBERTY, and dedicated
to the proposition that all men
are created equal."

256120.08

Atlanta

Declaring PL/SQL Variables

Syntax

```
identifier [CONSTANT] datatype [NOT NULL]  
[:= | DEFAULT expr];
```

Examples

```
Declare  
  v_hiredate      DATE;  
  v_deptno        NUMBER(2) NOT NULL := 10;  
  v_location      VARCHAR2(13) := 'Atlanta';  
  c_ comm         CONSTANT NUMBER := 1400;
```

Declaring PL/SQL Variables

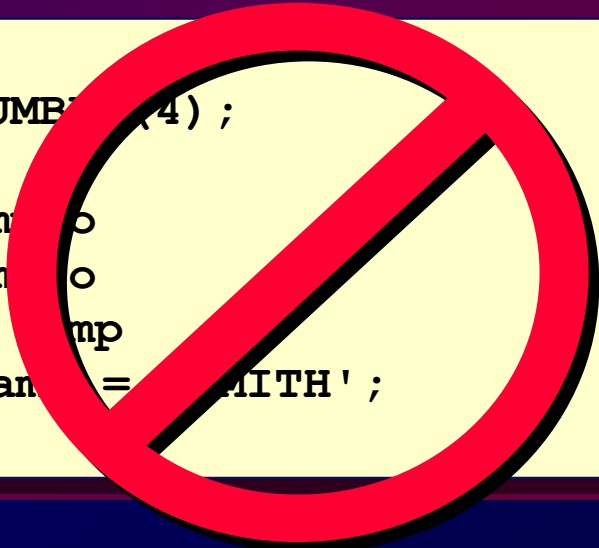

Guidelines

- **Follow naming conventions.**
- **Initialize variables designated as NOT NULL.**
- **Initialize identifiers by using the assignment operator (:=) or by using the DEFAULT reserved word.**
- **Declare at most one identifier per line.**

Naming Rules

- Two variables can have the same name, provided they are in different blocks.
- The variable name (identifier) should not be the same as the name of table columns used in the block.

```
DECLARE
  empno NUMBER(4);
BEGIN
  SELECT empno
  INTO empno
  FROM emp
  WHERE ename = 'SMITH';
END;
```

Assigning Values to Variables

Syntax

```
identifier := expr;
```

Examples

Set a predefined hiredate for new employees.

```
v_hiredate := '31-DEC-98';
```

Set the employee name to “Maduro.”

```
v_ename := 'Maduro';
```

Variable Initialization and Keywords

Using

- **:= Assignment Operator**
- **DEFAULT**
- **NOT NULL**

Scalar Datatypes

- Hold a single value
- Have no internal components

25-OCT-99

TRUE

256120.08

Atlanta

"Four score and seven years ago our fathers brought forth upon this continent, a new nation, conceived in LIBERTY, and dedicated to the proposition that all men are created equal."

Base Scalar Datatypes

- **VARCHAR2** (*maximum_length*)
- **NUMBER** [(*precision, scale*)]
- **DATE**
- **CHAR** [(*maximum_length*)]
- **LONG**
- **LONG RAW**
- **BOOLEAN**
- **BINARY_INTEGER**
- **PLS_INTEGER**

Scalar Variable Declarations

Examples

```
v_job          VARCHAR2 (9) ;  
v_count        BINARY_INTEGER := 0 ;  
v_total_sal    NUMBER(9,2) := 0 ;  
v_orderdate    DATE := SYSDATE + 7 ;  
c_tax_rate     CONSTANT NUMBER(3,2) := 8.25 ;  
v_valid        BOOLEAN NOT NULL := TRUE ;
```

The %TYPE Attribute

- **Declare a variable according to:**
 - A database column definition
 - Another previously declared variable
- **Prefix %TYPE with:**
 - The database table and column
 - The previously declared variable name

Declaring Variables with the %TYPE Attribute

Examples

```
...  
    v_ename           emp.ename%TYPE;  
    v_balance         NUMBER(7,2);  
    v_min_balance     v_balance%TYPE := 10;  
...
```

Declaring BOOLEAN Variables

- Only the values TRUE, FALSE, and NULL can be assigned to a Boolean variable.
- The variables are connected by the logical operators AND, OR, and NOT.
- The variables always yield TRUE, FALSE, or NULL.
- Arithmetic, character, and date expressions may be used to return a Boolean value.

Composite Datatypes

Types

- **PL/SQL TABLES**
- **PL/SQL RECORDS**

LOB Datatype Variables

Bind Variables

Referencing Non-PL/SQL Variables

Store the annual salary into a SQL*Plus host variable.

```
:g_monthly_sal := v_sal / 12;
```

- **Reference non-PL/SQL variables as host variables.**
- **Prefix the references with a colon (:).**

Summary

- **PL/SQL blocks are composed of the following sections:**
 - **Declarative (optional)**
 - **Executable (required)**
 - **Exception handling (optional)**
- **A PL/SQL block can be an anonymous block, procedure, or function.**

```
DECLARE
...
BEGIN
...
EXCEPTION
...
END;
```

Summary

- **PL/SQL identifiers:**
 - **Are defined in the declarative section**
 - **Can be of scalar, composite, reference, or LOB datatype**
 - **Can be based on the structure of another variable or database object**
 - **Can be initialized**

Practice Overview

- **Determining validity of declarations**
- **Developing a simple PL/SQL block**
